

The **3X** is the most versatile multi functioning flail mower designed for the smaller tractor. Consisting of 3 independent cutting units the **3X** is a butterfly flail mower reduced in size ideal for landscaping and maintenance work on big estates, green belts and parks. The units are engineered around the headstock structure in such a way that the 2 side units are hydraulically controlled and independently driven so that one unit can be upright at 90° cutting hedgerows whilst the other units can be mowing behind the tractor. The central unit can be either attached to the rear of the headstock or if preferred set on the front PTO of the tractor.
