SF BIO

The **SF BIO** is the clean mechanical solution for the elimination of weeds and crop residue without the use of chemical herbicides. The front twin wheels allow to set a precise and uniform working depth between **0 – 9 cm**. The limited working depth prevents both compaction and soil erosion whilst creating the ideal seedbed.

The standard rotor speed at **1000 PTO** is **340 rpm**, this combined with **L** shaped blades and the hydraulic rear tailgate guarantees both a completely biological method of crop residue destruction and re-distribution of the organical mass creating a layer of compost for the subsequent seeding.

MODELLO											
	kW	HP	cm	cm	cm	cm	nr	nr	Kg
